

Thursday, November 7 ** *Surface Parameterpalooza*

1. Let S be the portion of the plane $x + y + z = 1$ which lies in the positive octant.
 - (a) Draw a picture of S .
 - (b) Find a parameterization $\mathbf{r}: D \rightarrow S$, being sure to clearly indicate the domain D . Check your answer with the instructor.

2. Consider the surface S which is the part of $z + x^2 + y^2 = 1$ where $z \geq 0$.

- (a) Draw a picture of S .
- (b) Find a parameterization $\mathbf{r}: D \rightarrow S$. Check your answer with the instructor.

3. Let S be the surface given by the following parameterization. Let $D = [-1, 1] \times [0, 2\pi]$ and define

$$\mathbf{r}(u, v) = (u \cos v, u \sin v, v).$$

- (a) Consider the vertical line segment $L = \{u = 0\}$ in D . Describe geometrically the image of L under \mathbf{r} .
 - (b) Repeat for the vertical segments where $u = -1$ and $u = 1$.
 - (c) Use your answers in (a) and (b) to make a sketch of S .
4. Consider the ellipsoid E given by $\frac{x^2}{9} + \frac{y^2}{4} + z^2 = 1$.

- (a) Draw a picture of E .
- (b) Find a parameterization of E . Hint: Find a transformation $T: \mathbb{R}^3 \rightarrow \mathbb{R}^3$ which takes the unit sphere S to E , and combine that with our existing parameterization of the plain sphere S .
